

# Fellowship in Clinical Artificial Intelligence

Fellow: Robert Miller

Supervisor: Prof J. Teo

## Inter-cranial haemorrhage program (IHP)

### Overall aim

Improve the currently available IHP model

### Project aim

Employ and evaluate the use of active learning AI (MONAI label) to improve intra-cranial haemorrhage segmentations

### Steps

- 1) Train MONAI label
- 2) Evaluate performance
- 3) Use MONAI label to increase IHP training

Novice clinician vs. MONAI label segmentation			
DICE scores	Novice	MONAI	P-value
<b>Haemorrhage</b>			
Overall	0.91	0.99	<0.05
Easy scans	0.98	1.00	>0.05
Hard scans	0.85	0.99	>0.05
<b>Calcium</b>			
Overall	1.0	0.99	0.52
Easy scans	1.0	0.98	-
Hard scans	0.99	1	-
<b>Intra-ventricular haemorrhage</b>			
Overall	0.99	1.00	<b>0.08</b>
Easy scans	1.00	1.00	>0.05
Hard scans	0.99	1.00	>0.05
<b>Ventricular blood ('hard scans only')</b>			
Overall	0.42	0.82	<b>0.02</b>

## Computer vision and machine learning to automate hand function analysis

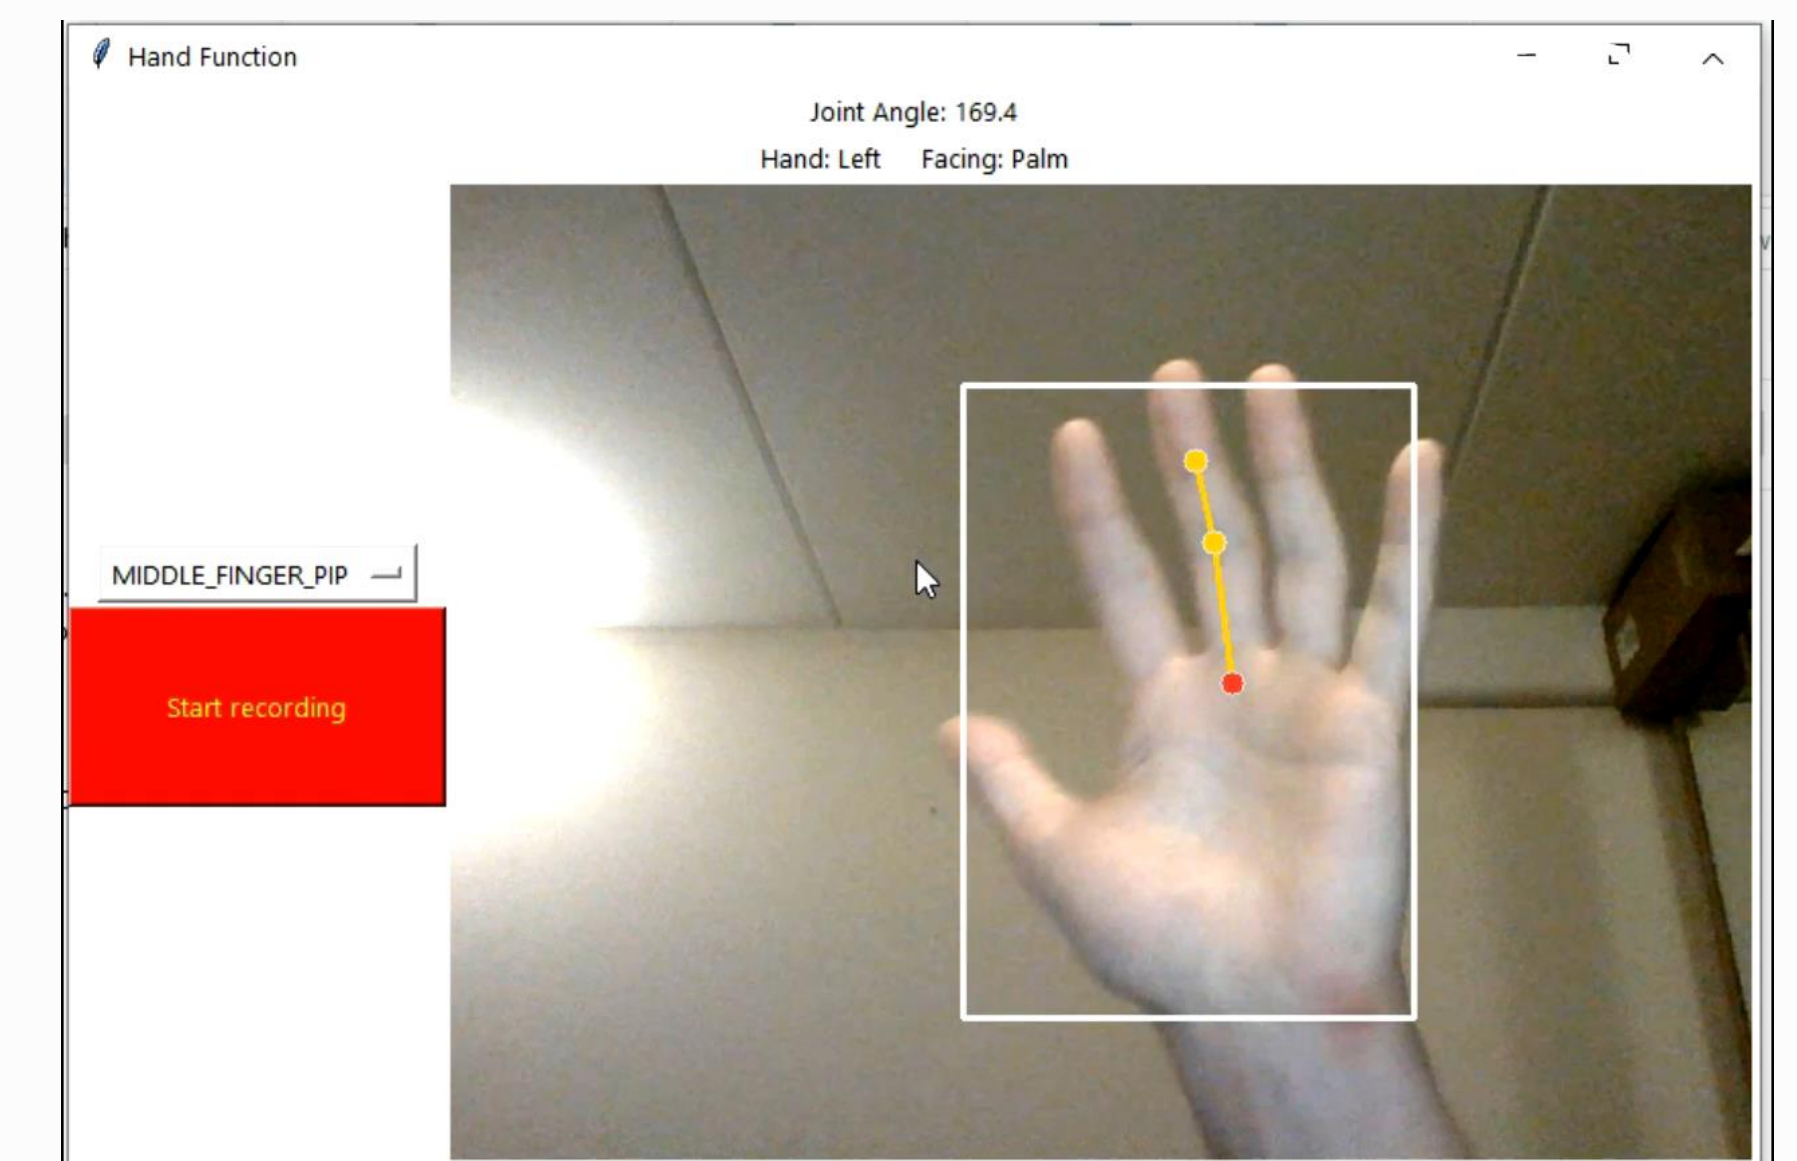

### Overall aim

Produce a model using computer vision to automate hand function analysis

### Project aim

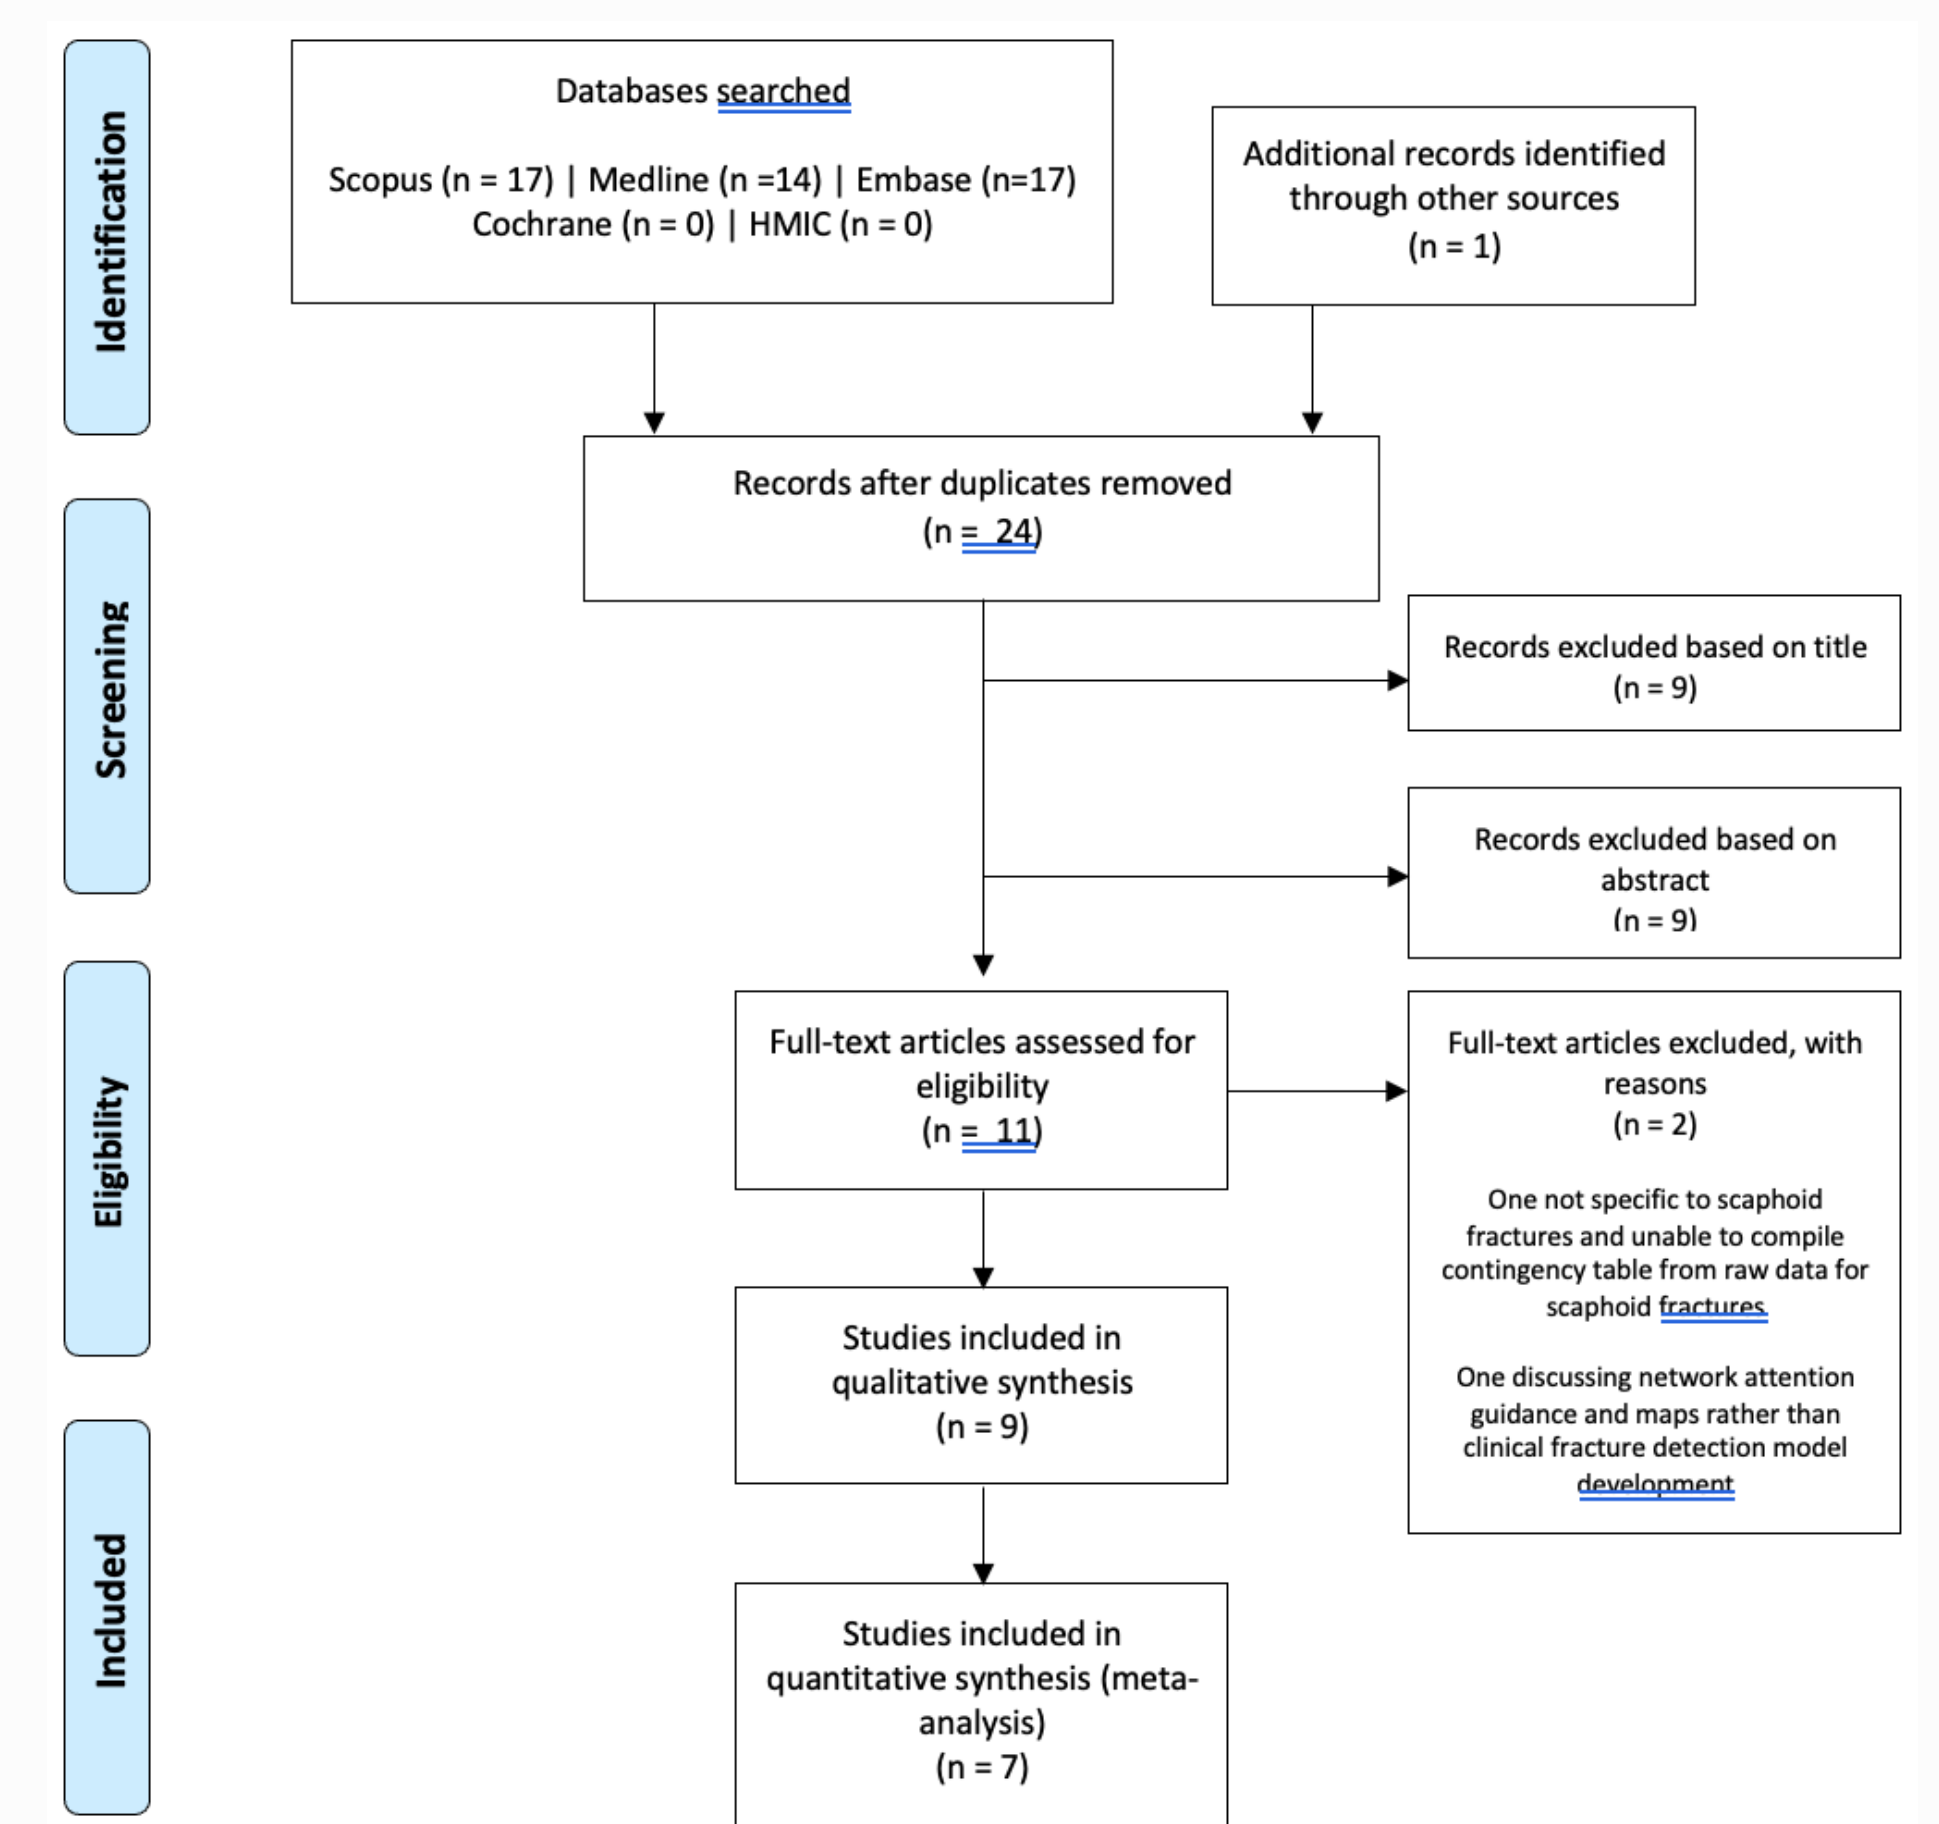

Harness Google Mediapipe to track each hand joint and estimate min/ max/ range of joint movement (in degrees)

## A systematic review and meta-analysis of scaphoid fracture detection models

### Steps:

- Systematic literature review
- Qualitative analysis
- Quantitative analysis (meta-analysis)
- Model design interrogation
- Quality and risk assessment (CLAIM and PROBAST tools)
- Model development recommendations

## The future & output

### Publications:

Review > J Hand Surg Eur Vol. 2023 May;48(5):396-403. doi: 10.1177/17531934231152592. Epub 2023 Feb 9.
